                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                               The invention describes a method of detecting the presence of a target CC CS198 polynucleotide in a test sample. The method comprises contacting CC the test sample with at least one CS198 specific polynucleotide or its CC complement, and detecting the presence of the target CS198 polynucleotide in the test sample, where the CS198-specific polynucleotide has at least CC soft identity to a polynucleotide having any of the 27 fully defined CC sequences of 34-2894 bp (S1-27) given in the specification, or their CC fragments or complements. The composition and methods are useful in CC diagnosing, staging, monitoring, prognosticating, preventing or treating, CC or determining the predisposition of an individual to, diseases and CC conditions of the gastrointestinal tract, e.g. cancer and in gene CC therapy. This is the amino acid sequence of a synthetic peptide based on CC consensus sequence shown in seq id 27.

The method involves detecting the presence of target CS198 polymucleotide in the test sample. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CS198 polymeptide, such as cancer of the gastrointestinal tract. These are also useful in gene therapy. The present sequence is a CS198 peptide used to illustrate the method of the

The CS198 gene is useful as a marker for gastrointestinal (GI) tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition to diseases and conditions of the GI tract, such as GI tract cancer, Barret's oesophagus, gastric ulcer, gastritis, leiomyoma, polyps, Crohn's disease, ulcerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New gastrointestinal polynucleotides, CS198, and their detection - us for developing products for the diagnosis and treatment of gastrointestinal disorders, e.g. cancers, gastric ulcer or gastritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Billing-Medel

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC The CS 198 polynucleotides, polypeptides and antibodies are useful for cdetecting, diagnosing, staging, monitoring, prognosticating, preventing, cc treating or determining predisposition to diseases and conditions of the CG Itract such as cancer, gastric ulcer, gastritis, Crohn's disease, cc ulcerative colitis, pancreatitis and Barret's oesophagus. The CS 198 polypeptides are useful as standards or reagents in diagnostic immunoassays, as components or as target sites for various therapies. CC Antibodies directed against at least one epitope contained within these colypeptides are useful as delivery agents for therapeutic agents, in CC polypeptides are useful as delivery agents for therapeutic agents, in CC polypeptides are not for screening for conditions or diseases associated with CS 198, particularly cancer. Monoclonal antibodies may also be used CC polynucleotide is also useful in gene therapy and drug screening. The CC method of the invention provides an alternative, non-surgical diagnostic method of the invention provides an alternative, non-surgical diagnostic method capable of detecting early stage GI tract disease such as cancer. CC method capable of detecting early stage GI tract disease such as cancer. CC method capable of a peptide derived from human CS 198 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                               The invention describes a method of detecting the presence of a target CS198 polynuclectide in a test sample. The method comprises contacting the test sample with at least one CS198 specific polynuclectide or its complement, and detecting the presence of the target CS198 polynuclectide in the test sample, where the CS198-specific polynuclectide has at least 50% identity to a polynuclectide having any of the 27 fully defined sequences of 34-2894 bp (S1-27) given in the specification, or their fragments or complements. The composition and methods are useful in diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition of an individual to, diseases and conditions of the gastrointestinal tract, e.g. cancer and in gene therapy. This is the amino acid sequence of a synthetic peptide based on the predicted human CS198 protein sequence derived from the CS198 consensus sequence shown in seq id 27.
                                                                    CS198
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Detecting the presence of a target CS198 polynucleotide in a test sample comprises contacting the sample with a CS198 specific polynucleotide and detecting the presence of the target CS198 polynucleotide in the test
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Billingel PA,

                                                                                                                                                                                                                                                                                                                                           Sequence 33 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to reagents and methods for detecting diseases of the gastrointestinal (GI) tract. The method involves detecting the presence of target CS198 polymucleotide in the test sample. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CS198 polympetide, such as cancer of the gastrointestinal tract. These are also useful in gene therapy. The present sequence is a CS198 peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Diagnosing diseases such as cancer of the gastrointestinal tract, by detecting aberrant expression or activity of the CS198 polypeptide, and associated treatment methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (GORD/)

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                      HUMAN

New gastrointestinal polynucleotides, CS198, and their detection - used for developing products for the diagnosis and treatment of gastrointestinal disorders, e.g. cancers, gastric ulcer or gastritis.

Claim 26; Page 102; 127pp; English.

AAW79677-W79680 are synthetic CS198 derived peptide fragments which are used in a method to detect the presence of a target human CS198 polynucleotide in a test sample. The CS198 gene is useful as a marker for gastrointestinal (GI) tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition to diseases and conditions of the GI tract, such as GI tract cancer, Barret's oesophagus, gastric ulcer, cancer, Barret's Crohn's disease,

The invention relates to a method of detecting the presence of a target CS 198 polynucleotide comprising contacting the test sample with at least one CS 198-specific polynucleotide. The method is useful for detecting diseases of the gastrointestinal (GI) tract organs, particularly cancer. The CS 198 polynucleotides, polypeptides and antibodies are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing, treating or determining predisposition to diseases and conditions of the GI tract such as cancer, gastric ulcer, gastritis, Crohn's disease, ulcerative colitis, pancreatitis and Barret's oesophagus. The CS 198 polypeptides are useful as standards or reagents in diagnostic
                                                                                                                                                     Detecting the presence of target CS 198 polynucleotide, useful for detecting or diagnosing diseases of the gastrointestinal tract, comprises contacting test sample with at least one CS 198-specific polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CS 198; gastrointestinal tract disease; GI tract; cancer; gastric ulcer; gastritis; Crohn's disease; ulcerative colitis; pancreatitis; Barret's oesophagus; gene therapy; drug screening; human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                immunoassays, as components or as target sites for various therapies. Antibodies directed against at least one epitope contained within these polypeptides are useful as delivery agents for therapeutic agents, in diagnostic tests and for screening for conditions or diseases associated with CS 198, particularly cancer. Monoclonal antibodies may also be used for the generation of chimeric antibodies for therapeutic use. The CS 198 polynucleotide is also useful in gene therapy and drug screening. The method of the invention provides an alternative, non-surgical diagnostic method capable of detecting early stage GI tract disease such as cancer. The present sequence is a peptide derived from human CS 198 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              gastrointestinal

invention 17;

describes

a method of detecting the presence of a target a test sample. The method comprises contacting

٠.

CS198 polynucleotide in a test sample. The method comprises contacting the test sample with at least one CS198 specific polynucleotide or its complement, and detecting the presence of the target CS198 polynucleotide in the test sample, where the CS198-specific polynucleotide has at least 50% identity to a polynucleotide having any of the 27 fully defined sequences of 34-2894 bp (S1-27) given in the specification, or their fragments or complements. The composition and methods are useful in

diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition of an individual to, diseases and conditions of the gastrointestinal tract, e.g. cancer and in gene therapy. This is the amino acid sequence of a synthetic peptide based on the predicted human CS198 protein sequence derived from the CS198 consensus sequence shown in seq id 27.

This sequence represents the C-terminal of the human CS198 protein which is used in a method to detect the presence of a target CS198 polynucleotide in a test sample. The CS198 gene is useful as a marker for gastrointestinal (GI) tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition to diseases and conditions of the GI tract, such as GI tract cancer, Barret's ocsophagus,

New gastrointestinal polynuclectides, CS198, and their detection - for developing products for the diagnosis and treatment of gastrointestinal disorders, e.g. cancers, gastric ulcer or gastriti

gastritis.

                                                                                                                                                                 the gastrointestinal (GI) tract. The method involves detecting the presence of target CS198 polynucleotide in the test sample. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CS198 polypeptide, such as cancer of the gastrointestinal tract. These are also useful in gene therapy. The present sequence is a CS198 peptide used to illustrate the method of the

         The invention relates to a method of detecting the presence of a target CS 198 polynucleotide comprising contacting the test sample with at least one CS 198-specific polynucleotide. The method is useful for detecting diseases of the gastrointestinal (GI) tract organs, particularly cancer. The CS 198 polynucleotides, polypeptides and antibodies are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing, treating or determining predisposition to diseases and conditions of the GI tract such as cancer, gastric ulcer, gastritis, Crohn's disease, ulcerative colitis, pancreatitis and Barret's oesophagus. The CS 198 polypeptides are useful as standards or respents in diagnostic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CS 198; gastrointestinal tract disease; GI tract; cancer; gastric gastritis; Crohn's disease; ulcerative colitis; pancreatitis; Barret's oesophagus; gene therapy; drug screening; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antibodies directed against at least one epitope contained within these polypeptides are useful as delivery agents for therapeutic agents, in diagnostic tests and for screening for conditions or diseases associated with CS 198, particularly cancer. Monoclonal antibodies may also be used for the generation of chimeric antibodies for therapeutic use. The CS 198 polymucleotide is also useful in gene therapy and drug screening. The method of the invention provides an alternative, non-surgical diagnostic method capable of detecting early stage GI tract disease such as cancer. The present sequence is C-terminal portion of human CS 198 polypeptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8888888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a method of detecting the presence of a target CS198 polynucleotide in a test sample. The method comprises contacting the test sample with at least one CS198 specific polynucleotide or its complement, and detecting the presence of the target CS198 polynucleotide in the test sample, where the CS198-specific polynucleotide has at least contacting to a polynucleotide having any of the 27 fully defined sequences of 34-2894 bp (S1-27) given in the specification, or their fragments or complements. The composition and methods are useful in clasmosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition of an individual to, diseases and conditions of the gastrointestinal tract, e.g. cancer and in gene therapy. This is the amino acid sequence of a synthetic peptide based on the predicted human CS198 protein sequence derived from the CS198 consensus sequence shown in seq id 27.

The method involves detecting the presence of target CS198 polynucleotide in the test sample. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CS198 polypeptide, such as cancer of the gastrointestinal tract. These are also useful in gene therapy. The present sequence is a CS198 protein used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorder; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system discorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                             diagnosing, staging, monitoring, prognosticating, preventing or treating or determining the predisposition to diseases and conditions of the GI tract, such as GI tract cancer, Barret's oesophagus, gastric ulcer, gastritis, leiomyoma, polyps, Crohn's disease, ulcerative colitis, and
                                                                                                                This sequence represents the human CS198 protein which is used in a method to detect the presence of a target CS198 polynucleotide in a te sample. The CS198 gene is useful as a marker for gastrointestinal (GI) tract disorders. The methods and products can be used in detecting,

The CS 198 polynucleotides, polypeptides and antibodies are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing, treating or determining predisposition to diseases and conditions of the GI tract such as cancer, gastric ulcer, gastritis, Crohn's disease, ulcerative colitis, pancreatitis and Barret's oesophagus. The CS 198 polypeptides are useful as standards or reagents in diagnostic

The invention relates to a method of detecting the presence of a target CS 198 polynucleotide comprising contacting the test sample with at least one CS 198-specific polynucleotide. The method is useful for detecting diseases of the gastrointestinal (GI) tract organs, particularly cancer.
